

UNPARALLELED IN PERFORMANCE, QUALITY AND TECHNOLOGY

CLUTCHES FLYWHEELS DISCS

Up to three different pressure plate clamp load designs offering light, moderate and firm pedal efforts for high torque applications.

Solid disc design provides faster shifting and high burst strength. Different disc options are available for desired torque capacity and engagement quality.

The ACT proprietary Positive Lift Floater System design offers quiet operation with no floater rattle and no posts to wear. It also offers the ability to adjust for disc wear and provides equal disengagement of both discs.

All ACT Twin-disc kits include a CNC-machined and dynamically balanced flywheel to ensure both a trouble-free installation and operation.
